

Time-resolved graph adaptation: 10 fresh d5 refits, 10,485,760 held-out shots

A More graph actions help; timing transfer still fails

B Correct timing matters beyond correct direction

A: 98⅓% paired complete-refit intervals (transfer decisions use 98.75%). B: privileged references, not Bayes oracles.

Synthetic completed-record decisions. Controller state: 160 bytes; graph and service costs are separate.
